DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114 was filed in this application after a decision by the Board of Patent Appeals and Interferences, but before the filing of a Notice of Appeal to the Court of Appeals for the Federal Circuit or the commencement of a civil action. Since this application is eligible for continued examination under 37 CFR 1.114 and the fee set forth in 37 CFR 1.17(e) has been timely paid, the appeal has been withdrawn pursuant to 37 CFR 1.114 and prosecution in this application has been reopened pursuant to 37 CFR 1.114. Applicant's submission filed on 5/23/07 has been entered.

Drawings

2. The drawings were received on 5/10/99. These drawings are acceptable.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claims 1-5 are rejected under 35 U.S.C. 102(b) as being anticipated by Puri et al (5,270,813).

Puri et al, in Figures 1 and 4, discloses a spatially scalable video coding and decoding method that is the same method of decoding MPEG encoded video containing predicted P frames as specified in claims 1-5 of the present invention, comprising the

steps of decoding a first macroblock of a first predicted frame 102 at a first resolution SIF and decoding a second macroblock of the first predicted frame 102 includes upsampling 128 of a stored reference macroblock at a second resolution 129 greater than the first resolution SIF, wherein the first predicted frame 102 is encoded at the second resolution CCIR; wherein the macroblocks have associated motion vectors (e.g. MPEG compression); and wherein the first macroblock (e.g. P or B) has high frequency component energy less than a threshold and the second macroblock (e.g. I) has high frequency component energy greater than the threshold.
